

Solutions for Lotus Notes

Iqura Technologies

INTRODUCTION

Iqura is a leading provider of IT solutions meeting the challenging needs of customers in the global market. We go beyond the traditional definitions of consulting, by innovating to bring you solutions that **dramatically improve** the efficiencies in your business. Established in 1998 and headquartered in Bangalore, our customers range from start-ups to Fortune 500 corporations.

The Lotus Notes suite provides security-rich software that enables businesses to communicate, collaborate and increase productivity. In addition to being a "groupware" system (e-mail, calendaring, shared documents and discussions), Notes/Domino is also a platform for developing customized client-server and web applications. Its use of design constructs and code provide capabilities that facilitate the construction of "workflow" type applications (which may typically have complex approval processes and routing of data).

You can choose Lotus software for its multi-platform application development features -- for discussion databases, dashboards, and people-driven applications like customer relationship management, help desk or supply chain management. You can also integrate Lotus Domino applications with IBM Workplace environments, WebSphere Portal solutions and many third party applications to extend your investment even further.

Iqura is well qualified to architect, build, support and enhance your Lotus Notes infrastructure. Our experience spans from extensive capability in Notes technology to building complex work-flow driven enterprise solutions and from document-management to multi-device integration.

To learn more about how we can help your IT initiatives, mail us at info@iqura.com.

LOTUS NOTES SOLUTIONS

The gamut of solutions that can enhance your business using Lotus Notes technology is immense. We offer below just some of the solutions where Iqura can increase the ROI on your investment.

Enterprise Integration

Integrate and extend your Lotus Domino, WebSphere Portal and IBM Workplace investments to create custom business solutions.

Dashboards

Dashboards and related business solutions are perfect for getting a top-view of how your organization is doing. Deploy role-based work environments and speed up time-to-value with dashboards, scorecards and composite applications.

Document Management

Use Lotus Notes for Documents, e-forms and Web content management. We have solutions to create, organize, share, and manage business information to provide it when and where it's needed -- on demand.

Collaboration

E-mail, calendaring and collaborative applications provide more than just messaging with Lotus Notes and Domino built-in collaboration tools and application platform.

Instant messaging, Web conferencing and team collaboration solutions that collaborate real-time to help speed decisions with Lotus Sametime, Lotus QuickPlace and more - stand-alone or integrated.

Mobile & Wireless

Our extended-enterprise solutions help in integrating business processes, applications and information with mobile and wireless devices and clients; so that the organization is available to you wherever you are.

LOTUS NOTES SERVICES

If you have invested in Lotus Notes or plan to do so, Iqura is your ideal development partner. With our long expertise in outsourced software development and time-tested offshore outsourcing processes, you can be sure that your projects are in the right hands. Our service offerings include:

Product Development

If you are an independent software vendor and have a product built around Lotus Notes, Iqura can provide dedicated product engineering services across the product lifecycle. Our long years of experience in product development for customers ensure that you will get a partner who understands the product development environment.

Application Development

Develop, enhance or maintain Domino applications for Lotus Notes, Web browsers, wireless devices and PDAs

Web Enabling

Do you need to provide Web browser access to your existing Lotus Notes client applications? We can do it seamlessly and with quick turnaround times.

Application Integration

One of the best ways to get more out of your existing Domino applications is to integrate them with various back-end systems, such as SQL Server, Oracle or with office tools like Microsoft Office and/or with other commercial products in your organization.

Enabled-for-mobile

If you have a mobile workforce, then your applications should be mobile too. You can quickly enable your workforce for higher productivity by extending your applications to make them available to staff in the field.

Upgradations

We can help you migrate from previous releases of Lotus Notes and Domino to Notes Domino 7.

Application Maintenance

Do you have applications that are in need of maintenance, but you don't have the development resources to do the work? Our offshore team will take the headache out of routine maintenance so that your own development resources can concentrate on higher-value work. When outsourcing for the first time, your best bet is to start with outsourcing maintenance activities.

Performance Analysis & Application Optimization

If you have an application that is performing poorly, Iqura can help you discover the problems and implement improvements. We can also help define high-performance architecture for your application during the design phase.

CASE STUDY

A leading independent software vendor specializing in Lotus Notes products (www.kolaco.com) and recently awarded the LotusAdvisor 2006 Editor's Choice Award wanted to scale up and offshore one of its products, **TrackMeet**, so that they could better focus on product marketing and ideation.

TrackMeet is a Lotus Notes product that has won numerous awards as the ultimate meeting management system. It streamlines the process of storing, maintaining and retrieving minutes and action items from the numerous meetings that occur throughout a company. It ensures that great ideas that emanate from meetings aren't lost due to lack of adequate follow-up. TrackMeet is designed to simplify the organization and distribution of the minutes and provide a mechanism to assure that all those great ideas don't get forgotten.

Iqura is partnering with Kolaco to provide product engineering services for new feature additions, maintenance as well as for extending the application to enterprise technologies such as IBM Workplace and Websphere.

SUMMARY

In this introduction, we have outlined our solutions for Lotus Notes to you. It is our belief that these services would provide significant value towards meeting your requirements.

Iqura will undertake to assess your requirements, evaluate possible options, and recommend potential solutions and implement the entire development process with you, our credentials for this assignment have been outlined in the document.

Please do feel free to contact us for further information on these and/or any of our other services.

We look forward to the opportunity of working with you for your development and consulting requirements.
